# REGIONAL TPM SHOP FLOOR DIGITALIZATION

Implemented in: Chile

## Challenges:

- **Enable decision-making using real-time information**, rather than relying solely on historical data.
- **Transform manual processes** into more efficient, automated, and intelligent processes.
- **Achieve rapid technology adoption** through a user-friendly experience, a highly scalable platform that is flexible to business needs and supports agile implementation.

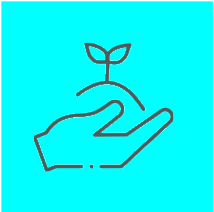

## Business objective:

- **Digitize maintenance processes across its plants with the aim of standardizing, certifying**, and making operations more efficient. In addition, provide a platform that accelerates the adoption of TPM as a standard of operational excellence, reducing manual tasks and promoting more automated and intelligent processes across operations throughout the region.

## Solution Benefits:

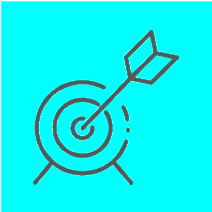

**Full traceability of maintenance and operational excellence processes..**

**Reduced inspection times and complete elimination of paper usage.**

**More than 50% reduction in rework.**

**More efficient, stable, and predictable operations.**

**Cost reduction** through a stronger focus on preventive and proactive maintenance.
