Virtualized Environment Modernization Solution with Private Cloud and Self-Service Management

Implemented in Uruguay

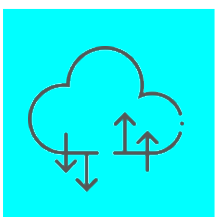

Challenge:

Migrate virtual machines using a lift-and-shift approach and modernize applications, while introducing a self-service portal to increase agility without disrupting operations.

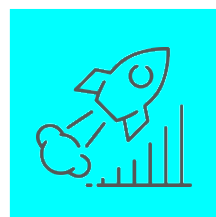

Solution:

- Replaced the VMware platform with a modern private cloud based on Azure Stack Hub.
- Migrated virtual machines using a lift-and-shift approach, followed by gradual application modernization.
- Implemented a self-service portal, increasing autonomy and operational agility.
- Cloud operations with data hosted in Uruguay, with no disruption to the business and a reduction in support tickets.

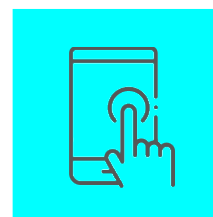

Benefits:

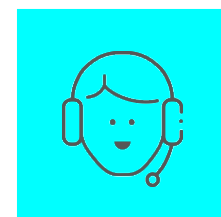

Private cloud experience **with local control over data.**

Migration executed with **no impact on production environments.**

Increased operational agility through a **self-service portal.**

Reduction in support requests and **improved operational efficiency.**
