Large-Scale IP Video Surveillance Solution for Critical Self-Service Infrastructure

Implemented in: Panama

Challenge:

Ensure continuous security, high availability, and regulatory compliance in geographically distributed self-service environments, guaranteeing real-time monitoring centers, operational resilience, and cost efficiency in critical financial operations.

Solution:

- Implementation of a modern, secure, and scalable IP video surveillance system for critical financial environments.
- Real-time video transmission, with local and centralized storage ensuring high operational resilience.
- Centralized management through a VMS platform, with dedicated connectivity to remote self-service points.
- End-to-end service model including equipment leasing, specialized technical support, and continuous operation.

Beneficios:

Significantly increased physical security at **self-service points and critical facilities**.

Scalable platform, integrated with **cybersecurity systems and prepared for nationwide expansion**.

High operational availability, **proactive support, and rapid incident response**.

Cost reduction through an **integrated leasing and maintenance model**.

Scalable platform, integrated with **cybersecurity systems and prepared for nationwide expansion**.
