## Smart Cities & Mobility

### Unified Electronic Ticketing Solution for Railway Networks

Implemented in: Chile

#### Challenge:

Create a unified ticketing system for all EFE branches, integrating new validators into existing equipment without affecting operations and enabling future expansion with other transport networks.

#### Solution:

- Implementation of a unified electronic ticketing system for regional railway networks.
- Installation of modern validators with support for QR codes, EMV, and existing transport cards.
- Integration of new devices with legacy equipment, without impacting ongoing operations.
- Architecture prepared for future expansions and integrations with metropolitan transport systems.

## Benefits:

Standardization of the payment system across the three branches.

Portable devices with multiple functionalities.

Compatibility with cards already used by users.

Adoption of modern access technologies.

Ease of expansion to other transport operators.

Preparation for integration with the RED transport system.
