Intelligent Logistics Monitoring Center Solution for Port Control and Operational Traceability

Implemented in: Chile

Challenge:

Integration of an advanced technological solution into the logistics system, ensuring a high level of service and functionalities focused on recognition, optimization, and control of container traffic.

Solution:

- Installation of a gantry with OCR/ANPR reading for vehicles and containers.
- Video capture and analysis using the SecurOS™ Cargo system, detecting codes and license plates.
- Direct integration with databases and port systems.

Benefits:

Automatic and **efficient validation** at access points.

Comprehensive visual record of **managed units**.

Management of vehicles and **cargo with real-time traceability**.

Intelligent search and **connectivity with integrated databases**.

Optimization of **logistics platform control**.

Agile implementation and **integration with ISS systems**.
