

BUSINESS CASE

## Smart Cities & Mobility

### National Integrated Public Video Surveillance Solution

Implemented in: Uruguay

#### Challenge:

Reation of a single public security platform with cameras and LPR systems deployed across the entire national territory, centralizing monitoring centers, emergency command, radio communications, and coordination of police and medical response in real time.

#### Solution:

Implementation of monitoring centers with comprehensive technological infrastructure, including workstations, servers, network, storage, and mobile units. Unified platform integrating different entities and emergency services into a single operational environment. Operation structured under a service-based financial model (OPEX).

## Benefits:

- Reduction in crime by up to **50% in monitored areas.**
- Efficient coordination **between emergency services.**
- Single platform for **national security management.**
- Optimized business model with **lower initial investment.**
- Comprehensive coverage with **mobile command and emergency response system.**
