Unified Platform Solution for Port Management and Efficiency

Implemented in: Peru

Challenge:

Creation of a neutral and scalable technological solution that connects all actors in the port ecosystem, integrating technical and operational systems with a focus on interoperability, efficiency, and advanced logistics management.

Solution:

Implementation of the first phase of management platforms, integrating multiple services and systems into a single solution. Facilitation of data exchange between operators, authorities, and different stakeholders in the ecosystem. Project structured with consulting, execution, and implementation stages, including a warranty period.

Benefits:

Efficient communication between public and private stakeholders.

Reduction in process times and greater logistics efficiency.

Integrated management of operations and full visibility.

Modular foundation prepared for **future expansions**.

Increased competitiveness through **digitalization**.
