Technological Renewal Solution for Validators in Bus Ticketing

Implemented in: Argentina

Challenge:

Modernization of more than 9,100 validators in buses, overcoming technological limitations and reducing vendor dependency, with the objective of improving operational efficiency and enabling future system evolution.

Solution:

- Comprehensive replacement with devices based on modern architecture and evolutive firmware.
- Integration into a centralized management platform.
- Greater operational flexibility and interoperability.

Benefits:

Faster and more secure validation.

Reduction of failures and optimization of maintenance.

Technological architecture prepared to incorporate new payment methods.

Greater independence from specific vendors.
