

## CASE STUDY

### Smart Cities & Mobility

## Secure Connectivity Infrastructure Solution with Centralized Management and SOC

Implemented in Chile

### Challenge :

Unify networking and security into a single platform, ensuring end-to-end protection, real-time monitoring and response, as well as a scalable, centrally managed architecture without increasing operational complexity.

### Solution:

- Reliable, high-performance connectivity for more than 300 clients.
- Integrated infrastructure with a strong focus on cybersecurity.
- Continuous protection against advanced cyber threats.
- Ensured operational continuity and customer trust.

## Benefits:

Network-integrated security with **advanced protection against known and unknown threats.**

Continuous monitoring by specialists, **ensuring high availability and operational resilience.**

Reliable and scalable connectivity, ready to support **business growth without compromising security.**

Reduced risks and operational costs through **centralized and simplified management.**
