Unified Video Surveillance and Alarm System Solution

Implemented in: Brazil

Challenge:

Implement a video surveillance system with distributed recording and centralized management, integrating multiple cameras and complementary technologies such as intrusion alarm systems across various operational units.

Solution:

- Real-time operation and monitoring of multiple systems.
- Centralized management of incidents and operational events.
- Cost optimization and improved operational efficiency.

Benefits:

Real-time alerts from **multiple systems**.

Unified remote **monitoring center**.

Cost reduction without **compromising security**.

Remote access to live and **recorded video**.
