

BUSINESS CASE

**Multi-Industry**

## National Solution for Livestock Traceability and Management

Implemented in: Uruguay

### Challenge:

Maintain up-to-date historical and sanitary information of productive assets, ensuring traceability, regulatory control, efficient auditing, and large-scale data integration.

### Solution:

- Implementation of a national traceability system using RFID technology and individual identifiers.
- Centralization and georeferencing of data in a dedicated processing center.
- Large-scale real-time monitoring, with functional support and integration into the production chain.

## Benefits:

Real-time georeferenced information for **agile decision-making in crisis situations.**

Mass identification of **assets using RFID technology.**

Expansion of traceability to **different species under individual and group identification models.**

Compliance with **international standards, strengthening sector competitiveness.**

Technological foundation prepared for **continuous system renewal and expansion.**
