Warehouse Asset Security and Access Control

Implemented in: Panama

Challenge:

Control assets across multiple warehouses using RFID technology, antennas, and alarms installed at each warehouse access point.

Solution:

- Use Asset Manager to manage tasks and asset movements.
- Each RFID reader connects to the system, allowing it to determine whether an asset is authorized to leave the warehouse.
- View the status of each asset.

Benefits:

Simple inventory control at each warehouse.

Asset control reporting.

Visibility across warehouses.

Complete traceability with multiple workgroups and permission levels.
